

Audit Mobile

Operational Sustainability, LLC (OS) offers the **OSSuite™ Audit Mobile module** as part of our overall mobility platform to streamline the auditing of any business process at the point of work, using tablets and/or mobile phones. Audit Mobile was built to be intuitive and user-friendly, requiring only simple training to start implementing effectively. Once trained users begin working with the tool, they quickly become expert users and are able to independently complete entries and add content. Control protocols can be enabled that trigger requests for additional input or information based on user answers to simple questions...ensuring that important information isn't overlooked or neglected in the process.

Field staff can take pictures with their tablet or phone and tie collected images to questions and responses, add comments in text fields, or link documents or other files. Once entries are completed, users can save the audit information for review for any non-conformances.

Audit Mobile offers both offline and online modes, enabling users to evaluate information and complete work where and how they need to.

For more information email us at info@os-orm.com or call (713) 355-2900.
