

Control of Work

Poor organization of work permits leads to poor work execution for routine maintenance and capital projects. OESuite™ electronically integrates and controls permits and certificates, identifies hazards and proper controls, conducts risk assessments, facilitates isolation management, and shares lessons learned. We even offer a visual environment, making it easy to renew hundreds of permits on the fly.

Our solution will allow you to:

- Plan permits in advance
- Edit permits easily
- Copy permits for repeat jobs
- Search existing permits
- Request new permits
- Link permits together
- Risk assess jobs and determine safety mitigations
- Capture lessons learned
- Archive the risk assessments for re-use
- View the entire worksite to determine what other jobs are currently taking place along with real-time permit condition monitoring
- Mobilization of work: Isolation and restoration activities in the field, and RFID to prevent the wrong items from being isolated or restored, and to associate locks with tags

With OESuite, your effective wrench time will be enhanced to avoid costly extended shutdowns and turnarounds, while ensuring your workers are protected by guiding them to the proper operational decision.
