

# Pre-Startup Safety Review

The Operational Sustainability, LLC® (OS) **OESuite™ Pre-Startup Safety Review (PSSR) Module** helps companies protect their workers during the commissioning of a project. PSSR is integrated with Management of Change (MOC), Work Permitting, Incident Management, Training and Work Management. PSSR can be done standalone for the commission of equipment or it can be robustly integrated into work processes such as MOC.

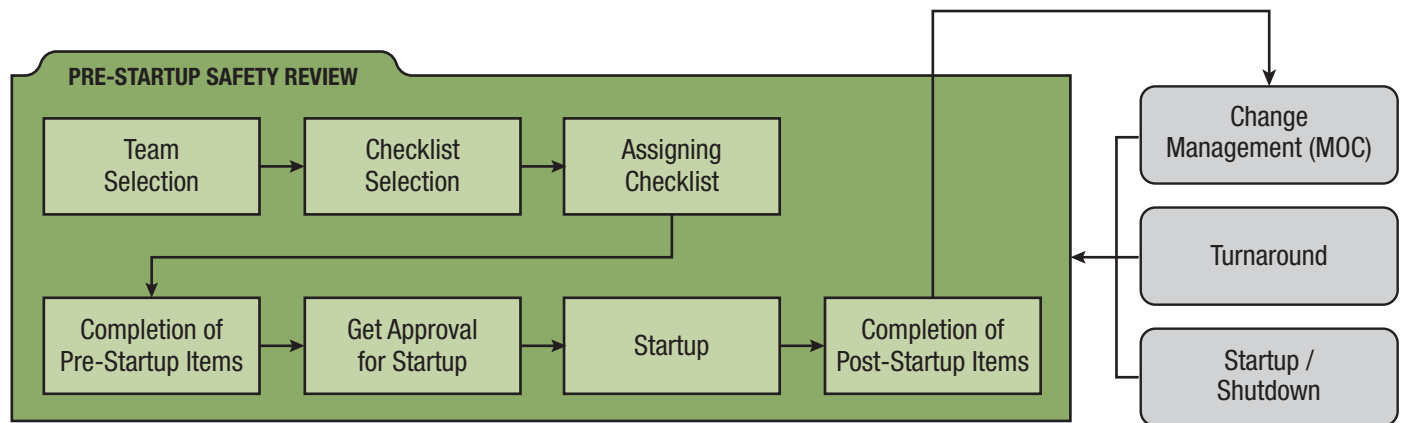

Figure 1 – PSSR Process in OESuite

PSSR allows users to load up their custom checklists (i.e. short and long forms). In addition, users can discern between pre- and post-commissioning activities. Our email notifications enable you to notify all affected parties. It has been shown that as many as 60-70% of all incidents occur at startup and shutdown. By leveraging our interoperability, users can ensure that all affected parties are aware of potential hazards and have been properly trained prior to the MOC being commissioned. Users can also link equipment, documents and drawings to the PSSR, while triggering work notifications from PSSRs.

## Extended OESuite™ Modules

Management of Change

Control of Work / Work Permitting

Task / Compliance Management

Compliance Strategy Management

Document Management / Redlining
