

Mobile Waste Management Module

The Operational Sustainability® OSSuite™ Mobile Waste Management module, part of the OSSuite™ solution platform, allows companies to track waste containers, storage area inspections, and shipments using smartphones or tablets without requiring additional hardware.

OSSuite™ has both offline and online modes, and improves the workflow and efficiency of container movements in your facility. Scan barcodes to track container movements (i.e. 90 day RCRA storage concern) and shipments. In offline mode, personnel can use tablets and phones to capture pictures and make notes in real time – at the point of inspection – and then review or work on them anywhere.

OSSuite's Mobile Waste Management Module allows environmental and operations personnel to:

- Capture barcodes to identify containers
- Identify opportunities to consolidate waste and empty containers
- Track container movements to storage areas or shipping department
- Perform storage area limits, inventories, and inspections with predefined checklists
- Generate specific uniform hazardous waste manifests and bills of ladings

Findings captured during the inspections are **integrated with the OSSuite™ Corrective and Preventative Actions module**. Our advanced analytics, alerts, and notifications enable rapid escalation when patterns outside the norm and threats are detected.

The OSSuite™ solution allows you to track waste throughout the entire lifecycle, optimizing waste management and minimizing overall costs in the facility.
