

Water/Wastewater Management

Operational Sustainability, LLC's **OSSuite™ Water Module** removes compliance challenges related to National Pollutant Discharge Elimination System (NPDES) permitting. Because it integrates out-of-the box with the EPA's NetDMR reporting system, our Water Module make it easy to produce and print your discharge monitoring reports (DMRs) and Multi-Sector General Permits (MSGPs).

- Experience full visibility into wastewater data and outfalls
- Easily schedule sampling and equipment tasks
- Simplify and automate compliance activities through integration with the Compliance Management module
- Quickly and accurately track permit types, renewal dates, limits, and environmental reporting requirements

Depend on the built-in calculation engine to obtain product recovery data including water conveyance and discharge, soil vapor extraction, energy usage and optimization, landfill gas, and groundwater treatment systems. Create water parameters and manage water for exploration and production operations both onshore and offshore, plus track information on pond tailings, taste and odor, corrosion, and other basic water quality issues.

Our comprehensive, cloud-based platform ensures full EPA compliance. Compliance personnel gathering samples in the field can integrate via mobile device with their Laboratory Information Management System (LIMS). Our lab data validator has built-in business rules to address complex verification requirements and we offer a lab interface with multiple format support to allow import of lab results directly into the Water Module.

Take your water/wastewater compliance to a new level of performance with these key features:

- Role and permission management to enable consultants, labs, and staff to interact
- Key Performance Indicators
- Email escalations based upon limits
- Mobile data access to lab results, reports, and input of sample information
- Complex calculation capabilities
- Ad hoc report creation on the fly
- Manage tasks directly from the dashboard and compliance calendar

Because the Water Module is part of the comprehensive OSSuite™, it seamlessly integrates with our Compliance Management Module to keep you in compliance with EPA validation requirements and regulatory limits, and, you can leverage the OSSuite™ Audit module to track compliance with policies and regulations over time.
